

PRESS RELEASE

Boccard USA

Having the ability to relocate a structure with minimal loss of materials is just one of the many advantages of a Rubb building.

Recently, Boccard USA, of Houston, Texas, purchased a used 39.4' (12m) x 40' (12m) THA shelter from Rubb, Inc. The building was 7 years old and was previously used at the Rubb factory in Sanford, Maine as a storage shelter. Rubb technicians disassembled the structure, cleaned and repacked the fabric membrane and reassembled the shelter on site in a matter of two weeks!

Boccard USA is a national firm specializing in pipe fabrication. Their Rubb THA shelter is presently being used as a pipe welding and assembly shop in Londonderry, New Hampshire.

The Rubb organization, with production facilities in the United States, Great Britain, and Norway, is recognized as a world leader in the design, development, and manufacture of relocatable structures.
