

PRESS RELEASE

Fryeburg Fair

In September 2007, Rubb Buildings of Sanford, Maine designed, manufactured and erected a 50' x 24' BVE custom stage enclosure for the Fryeburg Fair in Fryeburg, Maine. The transportable structure was installed on a flatbed trailer built specifically to support the 16,000 lb. load of the enclosure.

The building was designed with an open gable with architectural accents, (2) personnel doors in the rear gable, and roll-up sidewalls. Rubb engineers designed the structure with a 3 psf collateral load to support a theatrical speaker system and lights.

The Rubb organization, with production facilities in the United States, Great Britain, and Norway, is recognized as a world leader in the design, development, and manufacture of relocatable structures.
