

PRESS RELEASE

Gwinnett County, Georgia Purchases Rubb Salt Shed

Gwinnett County, Georgia was searching for a low cost solution to protect their area from contamination associated with storm water runoff from their salt and sand pile. With the low snow loads common to the state of Georgia, Rubb's THA range shelter met their requirements. The shelter measures 40' x 40' and was installed on a conventionally poured concrete foundation which also served as the berm wall to pile the salt and sand against.
