

PRESS RELEASE

Ocean Transportation Services Barge Cover

Ocean Transportation Services recently accepted delivery of their 20' x 53.4' BVR Range Rubb building for use as a sensitive equipment cover on their barge. Once the barge arrives at its destination, the Rubb building is crane-lifted on to the dock, dismantled and packaged for a truck shipment back to the original site. Ease of disassembly and the ability to lift the structure via crane were key design attributes of the Rubb structure.

The Rubb organization, with production facilities in the United States, Great Britain, and Norway, is recognized as a world leader in the design, development, and manufacture of relocatable structures.
